SOEN331: Introduction to Formal Methods for Software Engineering
Assignment 1 on extended finite state machines

Tarek Ait Hamouda (40044119), Abhijit Gupta (), Ethel Narra Pangan (40061530)

February 4, 2019

1 Room temperature control formal specification

The EFSM of the metro passageway is the tuple $S = (Q, \Sigma_1, \Sigma_2, q_0, V, \Lambda)$, where

$Q = \{idle, configuration\}$

$\Sigma_1 = \{request\ entry, pass\}$

$\Sigma_2 = \{lock, unlock, beep\}$

$q_0 : locked$

$V : ticket = \{valid, invalid\}$

Λ: Transition specifications

1. $\rightarrow locked$
2. $locked \xrightarrow{\text{request entry [ticket is valid] / (unlock ; beep)}} unlocked$
3. $unlocked \xrightarrow{\text{pass / lock}} locked$

The UML state diagram is shown in Figure 1.
